

## **Researcher position in Sensory Physiology**

A researcher position is available in Sensorion, a biotechnology company recently created ([www.sensorion-pharma.com](http://www.sensorion-pharma.com)) and located at the Institute for Neurosciences of Montpellier on St Eloi/Gui de Chauliac Hospital Campus.

Sensorion develops novel therapeutic strategies to cure vestibular deficits using in vitro strategies (cellular electrophysiology; molecular biology) and in vivo approaches (animal models of human pathologies; behavioral testing on rodents).

Applicant will integrate a neuroscience team that assesses the vestibulomodulatory properties of active compounds on cell culture models. Strong experience in patch-clamp and molecular biology is required.

The position available for 18 months will start September 2010.

To apply, please send a single PDF file that incorporates CV with a brief description of research experience, career goals, anticipated available date, and contact information of 2 references.
