Postdoctoral position in Sensory Physiology

A postdoctoral position is available at the Montpellier Neuroscience Institute (*team Pathophysiology and Therapy of Vestibular Deficits U583 INSERM*) starting Fall 2010, to study the modulation of vestibular oculomotor reflex (VOR) in animal models of vestibular deficits.

The team already developed a behavioral platform to test vestibular function in rodents. We wish to complete the platform by developing VOR measurements.

This one year position is funded by OSEO aide au transfer. Possibility of permanent position in *Sensorion*, a biotechnology company focused on the development of therapies for vestibular deficits will be available subsequently.

Experience in VOR recording in mouse and rat is required

Please submit a CV and the contact details of 2 referees to: chabbert@univ-montp2.fr
